AUSURV PTY LTD COMPANY'S ENVIRONMENTAL POLICY STATEMENT

The company recognizes environmental management as among its priorities and as a key determinant to sustainable development. We are committed to undertaking and completing projects using every practical effort available to minimise adverse environmental impacts, whilst maintaining a high standard of quality.

The Company is committed to integrating these policies, programs and practices fully into each area as an essential element of management in all its functions.

It is our objective to establish, maintain and continue to improve policies, programs and environmental performance, taking into account technical developments, scientific understanding, consumer needs and community expectations, with legal regulations and Codes of Practice as a starting point.

An essential aspect of this environment management system is to educate, train and motivate employees to conduct their activities in an environmentally responsible manner. To foster openness and dialogue with employees and the public, anticipating and responding to their concerns about potential hazards and impacts of operations, products, wastes or services.

The company makes a commitment to:

- Assess environmental impacts before starting a project, and advising the client of any potential environment impacts, environmentally unsound designs and inefficiencies in the consumption of energy and resources, in order to minimise the adverse environmental impacts and waste generation.
- Promote the adoption of these principles by associates and sub-contractors, encouraging and, where appropriate, requiring improvements in their practices to make them consistent with the Company, and to encourage the wider adoption of these principles by suppliers.
- Develop and maintain, where significant hazards exist, emergency preparedness plans in conjunction with the emergency services, relevant authorities and the local community, recognizing potential trans-boundary impacts.
- Measure environmental performance, to conduct regular environmental audits and assessments of compliance with company requirements, legal requirements and these principles.
